# Act Report – Seth Brown

Woof, Woof. Whats that you hear? Oh, that's man's best friend, the dog. Or as WeRateDogs says, doggo, floofer, pupper, and puppo. WeRateDogs has transformed the way twitter users post about their dogs. Dogs constantly receiving ratings above a 10/10 because "they're good dogs Brent". This being the case, what does their twitter data have to say about the dogs they rate? Do certain stages of the dog's life based on the stage name receive more activity from the people viewing the post? You shall see below.

Based on the dog stage, if you're lucky enough to be labeled as a pupper you have the highest probability of being retweeted at 8.78%. Wow! People love their puppers. The rest are as follows, doggo at 2.93%, puppo at 1.25% and floofer (my personal fave) 0.31%. Not so surprising, favorite count follows the same trend with pupper coming in at first with 989,929 favorites, doggo with 724,196 favorites, puppo with 210,339 favorites, floofer with 47,795 favorites.

Below you will see a scatter plot looking at all the different dog stages of life and how the rate comparatively
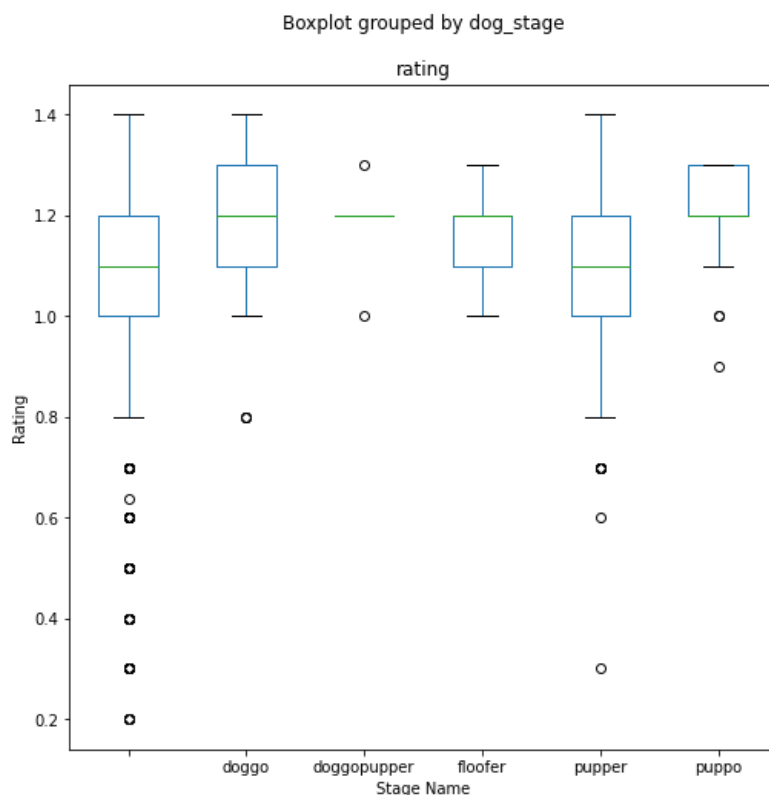

Excluding the column that is unidentified, doggo has the highest rating among the dog's stages of life name with a tight spread. Which is similar to what is said above. Pupper having the widest spread all the way from the top of the scale to the bottom. This could be because puppers are shared more than the other stages of dog life.
